We know that one of the most important considerations that you will make when deciding on a senior living community is the overall cleanliness and safety of the community. Bridge Senior Living is proud to share our “White Glove Confident Clean Program”. This program was developed through extensive research by our COVID-19 Safety Council which encompasses leadership from all disciplines experienced in infection control in senior living communities. We were able to build upon an already strong foundation of protocols. Bridge Senior Living is committed to delivering an industry-defining standard of cleanliness and sanitation in our communities as we provide a safe place for seniors to call home. Some of the main components of this new program are highlighted below. Our priority continues to be providing the best care possible to our residents and families.

1. As directed by the Centers for Disease Control and Prevention (CDC), Bridge Senior Living uses EPA approved chemicals that kill 99.9% of all bacteria and viruses on surfaces.
2. “High-Touch” area disinfection on a frequent, routine basis. These areas include, but are not limited to doors, door knobs, handrails, elevator buttons, entryway keypads, community telephones, light fixtures, light switches, etc.
3. Detailed resident apartment cleaning and disinfecting including but not limited to, door knobs, fixture switches, light switches, hard surfaces in bathroom / kitchen areas, T.V. remote, doors, handles and switches for all appliances, etc.
4. Handheld electrostatic sprayers that disperse a disinfecting solution that meets the EPA’s criteria for use against SARS-COV-2 (the cause of COVID-19) are being implemented for routine disinfection of common areas and resident apartments.
5. Hand sanitizer available at high traffic areas throughout the community.
6. All associates trained and required to wear approved Personal Protective Equipment (PPE) as recommended by the Centers for Disease Control and Prevention (CDC).
7. All associates monitored / screened on a daily basis for symptoms including temperature and being recorded through a digital kiosk called Accushield *
8. All visitors are screened on a daily basis for symptoms including temperature and being recorded through a digital kiosk called Accushield *
9. Each community has a plan to construct a Isolation / Cohort Unit consistent with government recommendation in the event that multiple residents test positive for COVID-19. The unit will include doffing chambers, air scrubbers and negative air pressure machines.
10. All new residents are required to undergo COVID-19 testing prior to admission, and a post move-in test 48 hours after move-in.
11. Common area, Activity Rooms and Dining Room furniture arranged to promote social distancing.
12. Social distancing guideline reminders posted throughout the community.

*You will always know that your new apartment has been thoroughly cleaned and disinfected following CDC guidelines by our White Glove seal of approval on the outside of the door. You will break the seal for the first time since cleaning when you enter your new apartment on move in day*
WHITE GLOVE CERTIFIED

High Touch, Enhanced Deep Clean areas in Community

1. DOOR KNOBS AND HANDLES - offices, residents, common areas
2. ENTRY WAY - key-pads and doors
